

Doteasy KB

How do I make the primary and secondary nameserver changes?

Because the primary and secondary nameservers are part of your domain registration record, you will need to login to your domain management panel to make the nameserver changes.

If your domain is currently registered with another service provider, you'll need to login to their system to make this change.

If your domain is currently registered with Doteasy, you'll find your domain management panel in Member Zone.
