Can I install a shopping cart on my website?

Yes, if you are using the Unlimited Hosting plan, you will be able to setup a shopping cart on your website. This hosting package provides support for PHP and MySQL which most shopping cart scripts require. A shopping cart script that we recommend you to use is Zen Cart. For more information on how to install Zen Cart, please refer to the Support Tutorials.

When you incorporate a shopping cart on your website, you may wish to consider purchasing a SSL certificate. The SSL certification will allow you and your customers to send information, such as payment details and order confirmations, securely over the Internet.

Please contact us if you need to order an SSL certificate. Installation is included free with any purchase of our SSL certificates.
