Do I need an SSL certificate?

In order for sensitive information, such as credit card information, to be sent securely over the internet, you will need to purchase an SSL certificate.

The Doteasy Ultra Hosting and Unlimited Hosting services support SSL certificates. You can purchase an SSL certificate for your domain name and we will install it for you.

An SSL certificate is what allows your website and online store to accept information via the Internet securely and identifies your store as a legitimate online business. When installed on the server where your site is being hosted, an SSL certificate will encrypt all information before transmitting it over the Internet.

If you would like to purchase an SSL certificate for your domain name, we provide GeoTrust SSL certificates. Geotrust is currently one of the industry leaders for SSL products today. We offer the 1 year QuickSSL certificate for US\$159 (25% off the retail price).

Exclusive QuickSSL features:

- Fully automated 10 minute provisioning process
- True 128-bit SSL encryption
- Compatible with 99% of all browsers
- Real-time, two-factor telephone authentication
- Business registration (DUNS number equivalent)

More info about the GeoTrust product: <https://www.doteasy.com/Services/GeoTrust/>

If you wish to purchase a certificate, you will need to contact us to do so.
