

Doteasy KB

How can I import my old email contacts into my new Doteasy account email?

To import your email contacts into your Doteasy Smartmail account, you'll need to first save them as a file in either CSV or VCF format. If your email system supports a contacts export feature, it should allow you to save your contacts in either one of these formats.

Once you've done that, login to your webmail account and click on Contacts on the left menu. Then, under Action menu select "Import Contacts". This will allow you to upload your CSV or VCF file and import your email contacts onto Doteasy SmartMail.
