How to configure complex tax logic

For example, in Canada there are sometimes two applicable taxes to a client's purchase. In this case, you'll need to setup two rules to let the system know when taxes should be applied.

Example Scenario:

Shop Located: Vancouver BC, Canada

Taxes in BC, Canada:

GST: 5.00% PST: 7.00%

Tax Scenario:

Shopper from within BC will be subjected to both GST and PST Shopper Outside of BC but within Canada (Other Provinces) will be subjected to only GST Shopper Outside of Canada will not be subjected to any Canadian taxes.

Rules Required: Assuming you have no other rules setup

Tax Settings Tutorial

Rule 1: GST Rule

Define A New Tax Zone: Canada All States / Provinces Select a Tax Class: General Rate Priority: 1 Tax Rate%: 5.00% Apply to: All Groups Tax Rate Description: GST

Rule 2: PST Rule

Define A New Tax Zone: Canada British Columbia Select a Tax Class: General Rate Priority: 1 Tax Rate%: 7.00% Apply to: All Groups Tax Rate Description: PST
