How to park a domain

Domain Parking is useful when you have additional domain names that you want people to be able to use to get to your website. For example, let's say your domain name is yourdomain.com, but you also own the domain yourdomain.net. If you park on of the domains on the other, then both will result in visitor getting to your website.
Note: Domains must be registered with a valid registrar before they can be parked. In addition, they will not be functional unless they are configured to point to your DNS servers.
1. Click the Parked Domains icon under the Domains section.
 2. Enter the domain you want to park here.
3. Click on the Add Domain button.

4. That's it! The domain park123.com is now parked and pointing to your main domain.
