How to use the IP Deny Manager in cPanel

The IP Deny Manager allows you to block access to your website from a specific IP address.

1. Click the IP Deny Manager icon under Security.
2. Enter the IP address you wish to block here.
3. Click the Add button.
4. That's it! You have now blocked anyone using the IP 123.456.78.90 from accessing your website.
